

To satisfy our family members we did an innovative Improvement to our indicator.

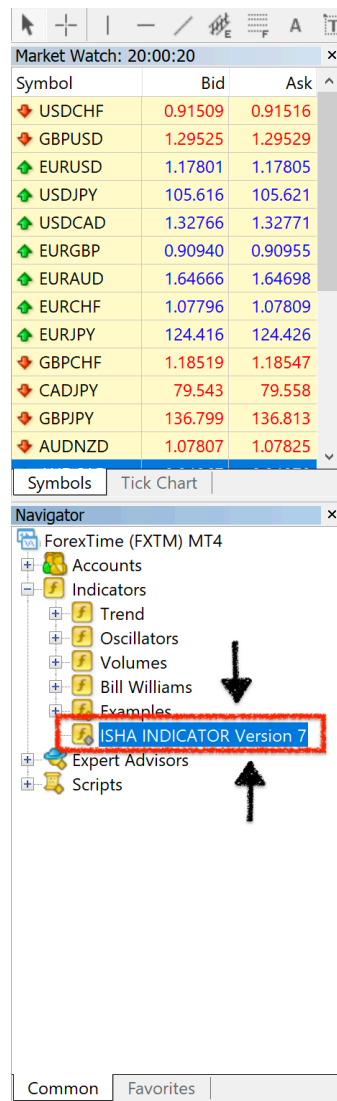

Now are you are able to adjust the setting and sensitivity of Indicator to get the best result possible based on your trading style ,your timeframes and your assets on the charts.

---

## How to adjust the setting in easy steps :

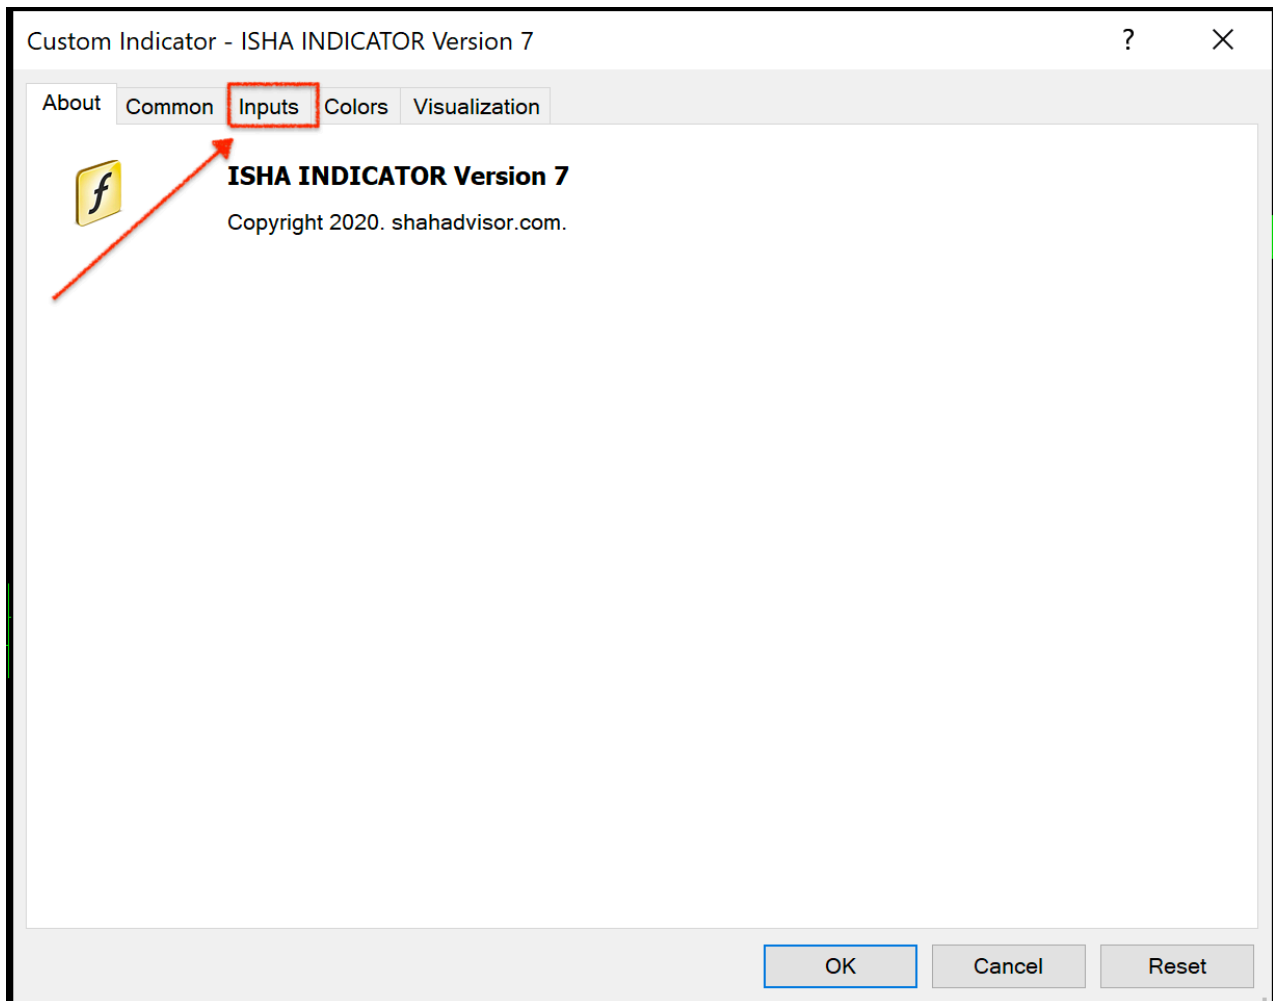

### STEP 1:

DOUBLE CLICK ON YOUR INDICATOR.

## STEP 2:

IN THE WINDOW OPENED , CLICK ON INPUTS

### STEP 3 :

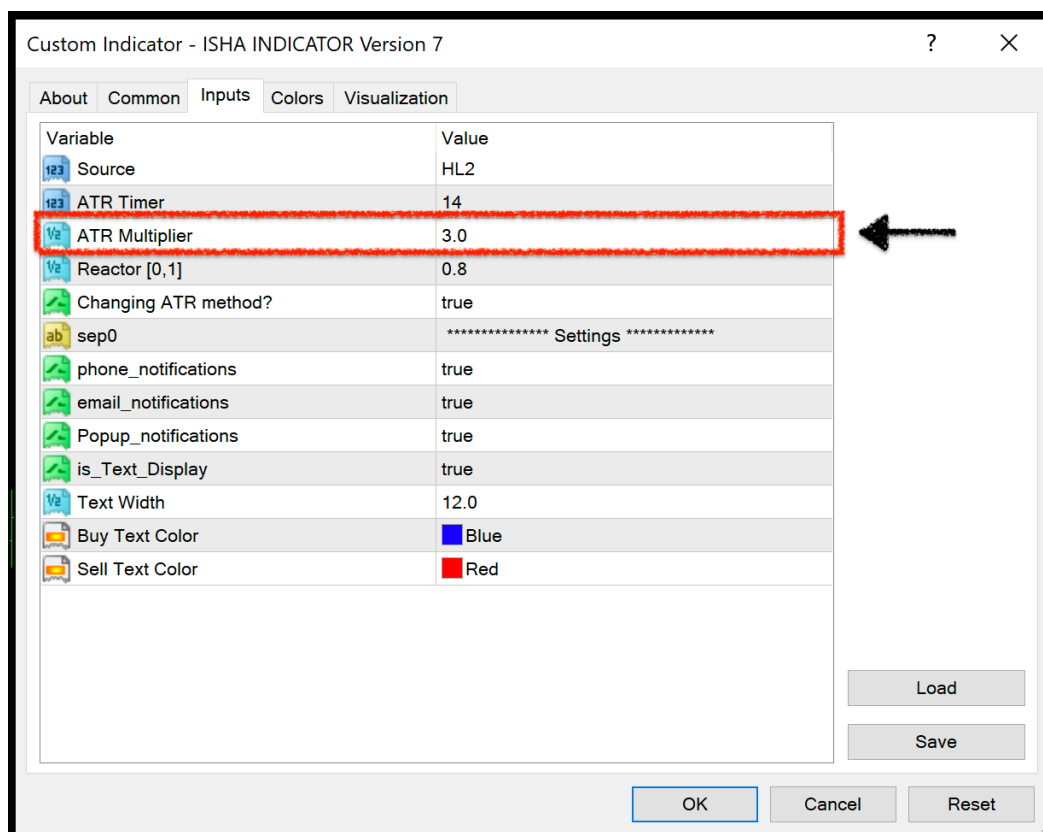

NOW YOU WILL SEE 2 NEW FEATURES ADDED TO YOUR INPUTS .

#### FEATURE 1 : ATR MULTIPLIER

Default setting = 3.0

Decreasing the ATR Multiplier Number below 3.0 , will increase the number of signals on chart .

Increasing the ATR Multiplier Number more than 3.0 , will decrease the number of signals on chart.

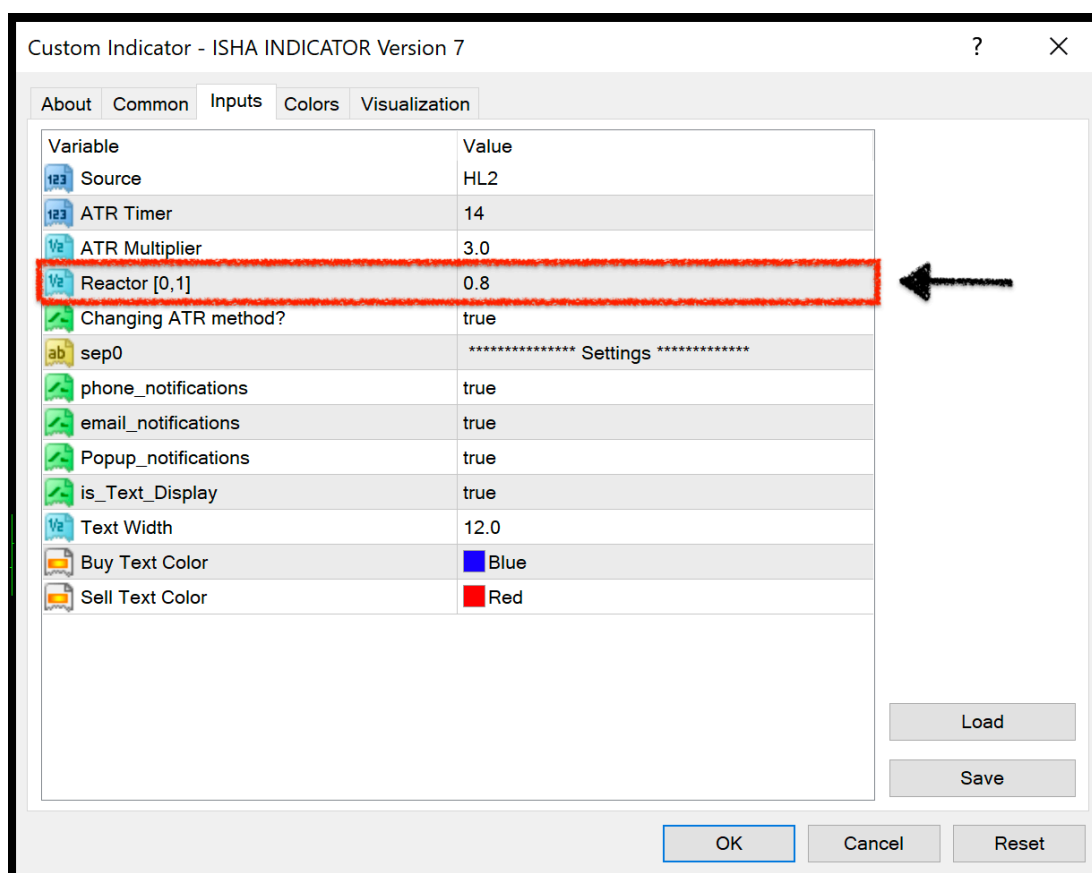

So based on your timeframes and amount of signals you want to receive , you can adjust the number and choose the most accurate signals based on history on charts and your test .

## FEATURE 2: REACTOR ( SENSITIVITY )

default setting : 0.8

Increasing the Reactor Number more than 0.8, will increase the sensitivity, the indicator react faster and you receive more signals.

Decreasing the Reactor Number below 0.8, will decrease the sensitivity, the indicator react slower and you receive less signals.

## Step 4:

After choosing your desire setting based on your requirements , press ok .

By changing these settings you see that signals and arrows will appear on different part of charts based on new settings .Choose the best one which has the most accurate signals based on your timeframes, assets and your trading style and get the most out of your trading .
