

# **VOLUME PRO X**

## **HIGH PROFITABLE SETTINGS**

Why this System is so High Profitable?

With this Indicators you have the Ability to look behind the Candles. The System detect how much Volume is in the Market. It detects if big Players are in before you get a Signal. So you have a BIG ADVANTAGE over other Forex Traders.

### **General Rules:**

1. We only open **SELL** Positions
2. Wait for **DOUBLE ARROW** for an very Accurate Entry
3. The best Signals on **H4 Timeframe** or Daily, where you can get up to 2.000 Pips (I prefer H4, because i don't like open Trades for a long time)
4. Trade only Pairs with Volatility and not consolidating: EUR/USD, EUR/CAD, EUR/AUD, EUR/JPY, USD/JPY, USD/CAD, AUD/USD, GBP/USD, GBP/JPY, AUD/JPY
5. Avoid not dynamic and Ranging Markets

### **If you trade H4 the best Strategy is the following:**

- If the **DOUBLE ARROW** appears enter your Trade immediately
- Your SL should be between 80 and 100 Pips - I use 120 Pips and NEVER hit SL
- TP1 is 20 Pips
- Cash out 50% from the Position if TP1 hit

- As soon as TP1 hit, set SL to Breakeven! IMPORTANT! You have now RISK-FREE PROFIT
- Next TP Zones are 20 Pips more. If i hit next TP, i set SL to the previous TP. You can use Trailing Stop also, but then often the Position will be fast out. With my Strategy you have 20 Pips difference to the last TP

Don't worry about the higher SL. The system is very accurate, but the market always has to get sales first, so sometimes we get a small drawdown like swing trades.

For more safety you can close a Trade, when a BUY Signal appears on your open Position. You can close when the BLUE ARROW will shown. There is no need to wait for DOUBLE ARROWS here.

**Use this Strategy if you don't have the Time to sit and watch at your Computer all the Day:**

- If the **DOUBLE ARROW** appears enter 2 TRADES immediately (Go with your money Management and split your Lot size then – Never risk more than 5% per 2 Trades). Use this Calculator for your preferred Money Management: <https://www.babypips.com/tools/position-size-calculator>
- Set the first Position to 120 Pips SL and 20 Pips Take Profit
- Set the second Position only to 120 Pips Stop Loss
- As soon as TP1 hit, first Position will be automatic closed
- Set SL for the second Position immediately to Breakeven
- Go forward with the next Take Profits for the second Position and don't forget to Trail your Stop Loss

With this System you can Trade every day and every Time with Volatility and not Ranging Markets. There is no need to Avoid News. I prefer London + New York Sessions.

You can also Trade smaller Timeframes with Highly Accurate Signals, but please wait for the **DOUBLE ARROW**, before you go in. You have to test the Stop Loss Point in Demo. For M1 its recommended to use 5-10 Pips SL and for M5 Timeframe you may use 15-30 Points.

It is also **VERY IMPORTANT** which Broker are you using. Most of them has Big Spreads or fishing your SL or TP.

I only trade with [IC Markets](#) and [Tradersway](#) at the Moment. I'm with them for many years now and never had a bad experience. Click on the Links to check them. But I prefer IC Markets.

Happy Trading!

#### Forex Risk Disclosure

Trading foreign exchange on margin carries a high level of risk, and may not be suitable for all investors. Before deciding to trade foreign exchange you should carefully consider your investment objectives, level of experience, and risk appetite. The possibility exists that you could sustain a loss of some or all of your investment and therefore you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with foreign exchange trading, and seek advice from an independent financial advisor if you have any doubts.
