

HOW TO INSTALL ON METATRADER4

At first you need a Zip Program to unzip the files. I personally like Winrar, its free:

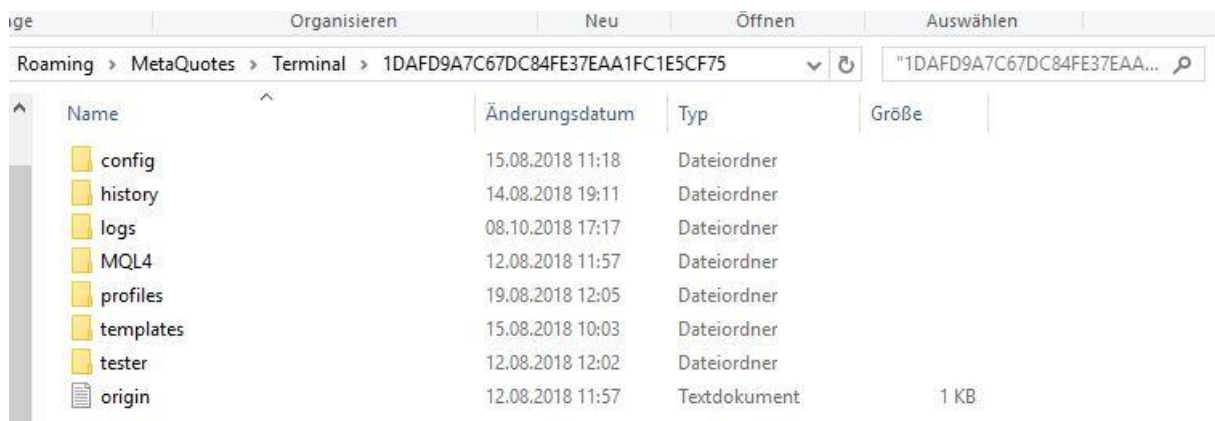

64-Bit Version: https://www.chip.de/downloads/WinRAR-64-Bit_37666786.html

32-Bit Version: https://www.chip.de/downloads/WinRAR-32-Bit_12994655.html

Now open your MetaTrader4 and click on the data folder:

Now you will see this folders:

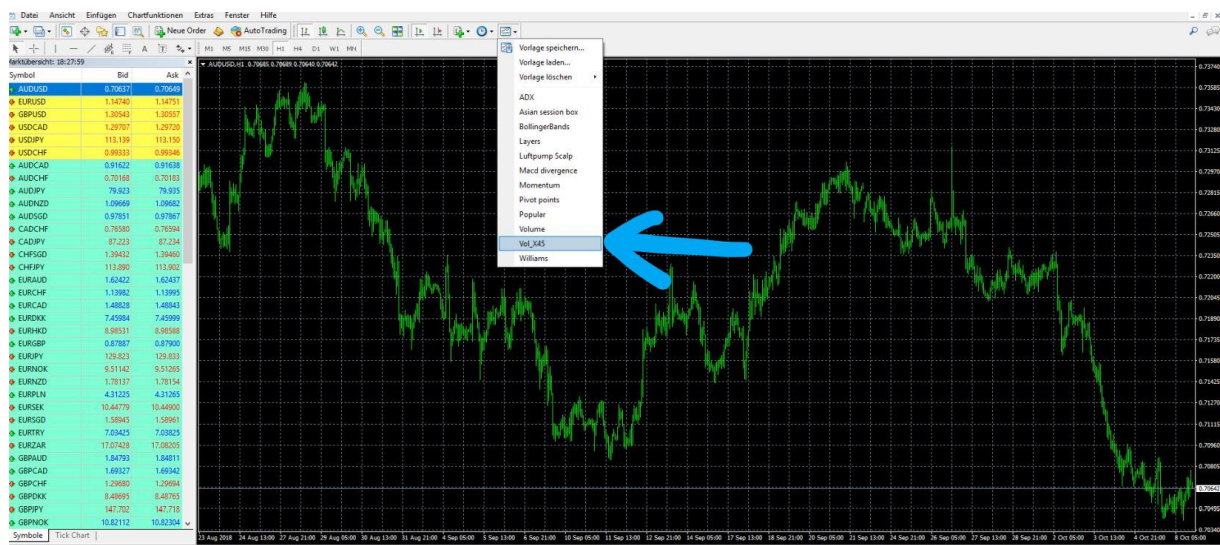

Please copy all files with the ending .ex4 in folder MQL4 - INDICATORS

Copy the both files with the name " MQL4 SOURCE FILE " (with the Symbol Number 4) in the same Folder MQL4 - INDICATORS

Copy the Template file VOL_X45 directly in the Folder " templates "

That's it. Now you can choose the VOL_X45 Template in your MetaTrader4:

If you have done all correct, you will see the following Screen:
(Don't forget to choose the H4 Timeframe)

If you need more help, just ask my friend. Hope this will help you to get started :)

Cheers,

Rene
